Comet application with Rails

Submitted by yas on Wed, 10/31/2007 - 08:20.

rails comet ajax web2.0

Who knows the fanatastic technology called comet?
Commet is the final weapon to our website much more interactive!!
Of course, you know Lingr!! Very Amazing web service.
Don't you want to develop the web site like Lingr with comet technology??
Here is your fire starter :)

At very first, we should install one plugin which is called "Shooting star!!"
This plugin makes your rails application fly up to the star and your request to the web server directly reflects to the reader of your web application.
OK, that's enough to enlight.
Start the very small tutorial. This tutorial makes your appilcation comet :)

```
1. #1: First of all, create your own project
2. $ rails real_chat
```

Done
